

Aegean SFC 235H

A range of fan coil units suitable for all kinds of commercial applications, from restaurants and hotels to office developments, with the ability to rapidly heat and cool large areas with much greater efficiency than other similar heating and cooling systems.

Fan Coils provide heating and cooling solutions for a wide range of applications. Fan coils can use either chilled water, or refrigerant to provide cooling but are generally associated with chilled water. Using just chilled water as the cooling medium means that maintenance and checking associated with the FGas regulations are not necessary.

Fan coils can use a slightly lower grade chilled water than that traditionally employed and are hence, in cooling mode, capable of providing cooling in conjunction with a reverse cycle heat pump or making use of free cooling from either a dry cooler or free cooling chiller.

Similar to the cooling medium, although fan coil units are capable of providing heating using either hot water or refrigerant, they are usually supplied with low temperature hot water.

Incorporating the latest EC motor technology, which can result in running-cost savings as high as 80%, and with variable speed control as standard, the Aegean delivers heat quickly and quietly.

Aegean with its EC fans is very efficient and fully comply with the Part L of the Building Regulations (2010). By using the variable fan speed, unoccupied setbacks etc using the precise control provided by the BMS interfaces further energy consumption can be achieved.

Features

- EC motor for BMS compliance
- Low sound levels
- Fully attenuated discharge plenum
- Positive fall drain tray
- Designed and made in the UK
- For bespoke specifications, including electric heating capability please contact us to discuss your requirements

Applications

Suitable for the following commercial application areas:

- Office buildings
- Hotels
- Restaurants
- Department stores
- Shopping malls

Finish

Chassis manufactured from 1.2mm hot dipped galvanised steel
All flanges formed inward facing to prevent exposure to bare metal edges

Installation

Flow and return connections 15mm
Designed for system pressures up to 10 bar
Fan coils are 4-pipe coils (heating and cooling circuit)

Customised requirements

All leading manufacturers controls factory fitted
Acoustically lined inlet plenum
Concealed/hidden applications (underfloor, behind false walls and ceilings)
Fresh air spigot
Electric heat
Bespoke options

Specification

To specify state:

Horizontal Fan Coil Unit 235mm high with EC motor.
As Smith's Aegean SFC23510 (or SFC23520, SFC23525, SFC23530, SFC23540, SFC23550, SFC23555, SFC23560)

Aegean SFC 235H

A range of fan coil units suitable for all kinds of commercial applications, from restaurants and hotels to office developments, with the ability to rapidly heat and cool large areas with much greater efficiency than other similar heating and cooling systems.

Fan

Controls enclosure

Heat exchanger

Fan mounted inside

Condensate drip tray

Construction

Chassis manufactured from 1.2mm hot dipped galvanised steel. All flanges formed inward facing to prevent exposure to bare metal edges.

Access is provided for maintenance of the fan/motor assembly and also to the coil and condensate tray.

Chassis incorporates an integral discharge plenum chamber. Spigots provided as standard and fixed in the required position.

Fans

Fans are direct drive, double inlet (SFC235, SFC260 and SVFC500), forward curved centrifugal type. Both the fan scroll and impeller are galvanised steel. Fan and motor assemblies mounted separately to the fan deck and allows individual removal for non-routine maintenance or replacement. Each fan and motor assembly is statically and dynamically balanced and fitted with neoprene rubber and vibration mounts.

Fan motors

Motors are external rotor EC commutated. The power factor is a minimum of 0.9. Motors have maintenance free and sealed-for-life bearings.

Motors are internally electronically overload protected and insulation conforms with EN 60335-1 class B.

Speed controls

Variable speed control and illuminated on/off switch as standard (additional optional range available including water side/air side controls).

Heat exchangers

Coils are manufactured from seamless 3/8" copper tube mechanically expanded into accurately pre-formed collars in aluminium fins giving maximum heat transfer capability.

All coils are circuited counter flow and bottom to top to optimise output and provide free venting/draining. Each coil has been fitted with a manual air vent and drain plug. Coil connection handling is dictated against direction of air flow. Coil termination is 15mm o/d plain copper tails at 40mm centres for fitting to industry standard water control valves. Tails pass through an aluminium support plate to provide extra rigidity and terminate within the profile of the unit to prevent transit/site damage. Every coil is leak tested to 21 bar gauge at point of manufacture and additionally to 7 bar gauge c/w valve assembly.

Condensate drip tray

The condensate drip tray is manufactured from 1.2mm hot dipped galvanised steel welded at each corner. The tray is fully insulated against external condensation and have a positive fall to a 15mm plain copper drain point, ensuring effective draining when the unit is installed correctly. The tray covers the entire coil and valve assembly. The connection point is located within the profile of the unit to avoid transit/site damage.

Filters

Filters are easily removable for routine maintenance, cleaning or replacement. Filter media is to EU2 to Eurovent 4/5 (EN779 Rating – G2). If specified filters with EU3 Eurovent (EN779 Rating – G3) can be specified.

Controls enclosure

Where possible all controls are fitted to a control back plate, which in turn, is mounted within the electrical enclosure. The enclosure has easy access from both sides and below. The whole electrical enclosure, including switches is located within the profile of the unit to prevent transit/site damage.

Accessories

The standard base unit does not include any temperature controls, modulating valves or transformers.

These parts are all fitted as requested and specified by the contractor.

Aegean SFC 235H

A range of fan coil units suitable for all kinds of commercial applications, from restaurants and hotels to office developments, with the ability to rapidly heat and cool large areas with much greater efficiency than other similar heating and cooling systems.

- A) Duties are based on 30 Pa ESP.
- B) Refer to air Volume & Cooling Correction Factors chart for alternative ESP conditions.
- C) For alternative chilled water conditions please contact Smith's Environmental Systems Ltd.
- D) For full technical selection schedules including water flow rate and pressure drops, please contact Smith's Environmental Systems Ltd.

- A) Duties above are based on 30 Pa ESP.
- B) For alternative ESP conditions, please contact Smith's Environmental Systems Ltd.
- C) For alternative 'air on' temperatures, calculate the factor as below and multiply by mean basic rating to obtain new capacity.
Factor: Calculate the mean water temperature (i.e. EWT/LWT of 60°/50°C = 55 EWT/LWT of 82°/71°C = 76.5) minus the required 'air on' temperature.
Example: For an 'air on' temperature of 19°C and EWT/LWT of 60°/50°C then the calculation would be 55 19 = 36. Therefore, to attain the capacity of SFC 50 at speed 3, take the mean basic rating (0.0734) and multiply by factor(36); 0.0734 x 36 = 2.64 kW.
- D) For full technical selection schedules including water flow rates & pressure drops please contact Smith's.
- E) Duties are based on a standard 4-tube heating circuit. Larger duties are achievable by increasing heating coil circuitry. Please contact Smith's for further details.

A) The acoustic data provided is based on an ESP of 30 Pa.
 B) Inlet & casing figures are sound power levels (SWL DB ref 10⁻¹² W).
 The following factors have been applied to the discharge sound spectrum state to allow for ductwork, plenum and grille:

63	125	250	500	1k	2k	4k	8k	(Hz)
-5	-5	-5	-9	-10	-10	-9	-3	(dB)

- (Add factors back into discharge spectrum to return to sound power levels)
- C) NR figures are given for guide purposes only and cannot relate to every given application. We recommend that the advice of an acoustic engineer is sought on individual projects in order to obtain accurate NR levels for a given space.
 - D) Consideration must be given to spigot connection number and dimensions in order to achieve acceptable air velocities (2.5m/s or below). This includes connected ductwork as increased velocity will in turn increase sound levels.

Aegean SFC 235H

Aegean by Smith's is a range of fan coil units suitable for all kinds of commercial applications, from restaurants and hotels to office developments, with the ability to rapidly heat and cool large areas with much greater efficiency than other similar heating and cooling systems.
